Mines-Ports MP 2021 Analyse
363.
       g ∈ C° ( [1, + ∞ E)
       Vm EIN? Bn IR+ - IR 1+ mp(tm) dt
 cdv t=1+ to donne
                 Vm & 12, Vn & 1R+, f. (2) = 5 f((1+ m)m) du
On pose Vnent, gn; ED, x] -> IR

ED, x] -> IR

ED, x] -> IR

ED, x] -> IR
                         f: [0,7] → IR

t → f(et)
Soit x EIR+
On a
           1 Vn EIN? gn & Cpm (E0,27,18)
           (1) P € C°( E0, en 1)
TBA: Mn = Supili. On a Yte Eo, n7, Vneine
                                             0 5 (1+ t) > 6 et 6 ex
Donc t -> Mr convient. (21)
Le théorème de convergence dominée fournit
                  \int_{0}^{\infty} f(h+\frac{t}{n})^{m} dt \rightarrow \int_{0}^{\infty} f(e^{t}) dt
* Étude CVU
               PIR + IR

THE NEW TON
   \int_{0}^{\infty} f((1+\frac{t}{n})^{n}) dt = \int_{0}^{\infty} (1+\frac{t}{n})^{n} dt \dots \sim 2^{m+1}.
                    Set dt ~ en donc on mia pas cvu.
